

TS806-03

Smoke & Cordless Heat Detector Test Set 6.0 m

General

The TS806-03 is an economical kit with testing tools in a convenient kit format.

The kit contains:

- a fibre-glass telescopic pole of 4.5 m
- universal detector removal tool
- aerosol smoke dispenser
- cordless heat detector heat unit
- 2 x battery batons
- fast charger
- protective carrying / storage bag

Installer friendly

The TS806-03 test and service equipment allows the user to rapidly and easily test practically all smoke detectors. Lightweight and rugged materials ensure long life and allow servicing up to heights of 6 m, using extension elements. The tools have an integrated design providing a complete solution with the minimum number of components.

Smoke testing

Included in the TS806-03 is a touch sensitive aerosol dispenser which is on a swing frame. The robust, injection-moulded design allows it to withstand the rigours of everyday use. It allows the test gas canister (SC008 or SC008CO) to be pre-pressed so that only a small upward pressure is needed to release the gas. The transparent cup allows the user to see the illuminated LED of the activated detector. The dispenser and patented diaphragm conserves the aerosol, and detector testing is efficient and fast using a minimum amount of test gas.

The test aerosol is the result of an extensive two year research programme providing the most efficient and safest way to test both ion and photo smoke detectors. With a minimum impact to health, safety and the environment, the non-toxic, non-flammable particles allow fast response and clearing times and leaves smallest amount of residue. No damage to the detector plastic and components is also ensured.
